Acknowledgements:

We thank all the taxonomists and ecologists that has made this database possible by contribut-
 ing with their fieldwork data.

Biosketch:

Dr. Jose B. Lanuza is a long term collaborator of Dr. Ignasi Bartomeus. Their work focuses
 on understanding the ecological processes that drive plant-pollinator interactions at different
 ecological scales. This research is another piece of the puzzle that will contribute to our
 understanding of how interactions change with various environmental drivers. Their work
 has primarily involved flowering plants and pollinators, where they have addressed questions
 related to their coexistence, interaction probability, and ecology. They have created the first
 database of Iberian bees for Spain and are strong advocates for reproducible science; this work
 is a perfect example of it. Further examples of the ongoing work and past projects can be
 consulted at Ignasi Bartomeus lab web page: <https://bartomeuslab.com/projects/>.
